Fund concept

The Kathrein Yield + (EUR) invests in short-term bonds and money market papers. These are only quoted in euros and must have a good credit rating. By using a quantitative model, a return of two percentage points above the twelve-month interbank interest rate Euribor is targeted. The model combines different categories of securities (interest rates, currencies, stocks and volatility) with a low correlation and can benefit from rising as well as falling prices. The selection and weighting of the models is based on the specification of a return-to-risk indicator that is stable over time.

*The Sharpe ratio compares the additional return and risk of an investment with a safe (risk-free) money market investment, taking into account the volatility of the respective portfolio.

Past performance is not a reliable indicator of future performance and returns of the fund. The performance is calculated in accordance with the OeKB method and already takes into account management fees, any performance-related fee and other costs charged within the fund. Individual costs such as the subscription fee, redemption fee or taxes such as withholding tax are not included in the performance calculation. The specific, individual amounts of these are not known and, if taken into account, would have a correspondingly negative impact on performance. If a purchase fee of 3% is charged, this reduces the performance in the year of purchase by EUR 300 for every EUR 10,000 invested. Note for investors with a home currency other than the fund currency: We would like to point out that the return may rise or fall as a result of currency fluctuations.

Fund notice

The fund currency of the fund is EUR. The fund regulations of Kathrein Yield + have been approved by the Financial Market Authority. Kathrein Yield + may invest more than 35% of the fund assets in securities or money market instruments issued or guaranteed by Australia, Germany, France, Italy, Japan, Canada, Mexico, New Zealand, Austria, Sweden, Switzerland, Spain, South Korea, the United States of America or the United Kingdom of Great Britain and Northern Ireland via individual security investments and/or via investments in other investment funds, whereby the investment in one and the same issue may not exceed 30% of the fund assets. The management company may enter into transactions with derivatives for Kathrein Yield + as part of the investment strategy. This may at least temporarily increase the risk of loss in relation to assets held in the fund. Derivative instruments that are not used for hedging purposes may be acquired. In this context, investments may also be made predominantly (in relation to the associated risk) in derivatives, whereby the risk amount for the market risk (absolute VaR) set for all fund investments at a maximum of 7% of the net asset value of the fund assets must be complied with. Due to the current low or negative capital market returns, interest income in the fund is currently insufficient to cover current costs and is highly unlikely to do so in the near future. Reliable longer-term forecasts are not possible in view of the imponderability of future market developments. Due to the composition of the fund or the management techniques used, the fund exhibits increased volatility, i.e., the unit values are exposed to large upward and downward fluctuations even within short periods, and capital losses cannot be ruled out.
